

ASSIGNMENT 2

Student Name	Aravindhan R
Student Roll Number	811219205003
Team ID	PNT2022TMID44997

1. Create User table with user with email, username, roll number, password

```
CREATE TABLE User(  
    Email varchar(100),  
    Username varchar(100)  
    Roll number int,  
    Password(100)  
);  
  
INSERT INTO User (Email, Username, Roll number, Password)  
VALUES  
    ('abc@gmail.com', 'xyz', '111', 'abcd'),  
    ('123@gmail.com', 'abc', '112', 'aabb');  
    ('xyz@gmail.com', 'ram', '113', 'ffihja');
```

2. Perform UPDATE, DELETE Queries with user table

```
CREATE TABLE User(  
    Email varchar(100),  
    Username varchar(100)  
    Roll number int,  
    Password(100)  
);  
  
INSERT INTO User (Email, Username, Roll number, Password)  
VALUES  
    ('abc@gmail.com', 'xyz', '111', 'abcd'),  
    ('123@gmail.com', 'abc', '112', 'aabb');  
    ('xyz@gmail.com', 'ram', '113', 'ffihja');
```

```
UPDATE User  
SET Username = 'shob'  
WHERE Roll number = 112  
  
DELETE FROM User  
WHERE Username=xyz ;
```

3. Connect python code to db2

```
import ibm_db
conn = ibm_db.connect("database","username","password")
```

```
import ibm_db
ibm_db.connect("DATABASE=name;HOSTNAME=host;PORT=60000;PROTOCOL=TCPIP;UID=user
name; PWD=password;", "", "")
```

4. Create a flask app with registration page, login page and welcome page. By default load the registration page once the user enters all the fields store the data in database and navigate to login page authenticate user username and password. If the user is valid show the welcome page.

app.py

```
from flask import Flask, render_template, request, redirect, url_for, session
from flask_mysql import MySQL
import MySQLdb.cursors
import re
```

```
app = Flask(_name_)
```

```
app.secret_key = 'your secret key'
```

```
app.config['MYSQL_HOST'] = 'localhost'
app.config['MYSQL_USER'] = 'root'
app.config['MYSQL_PASSWORD'] = 'your password'
app.config['MYSQL_DB'] = 'geeklogin'
```

```
mysql = MySQL(app)
```

```
@app.route('/')
@app.route('/login', methods=['GET', 'POST'])
def login():
```

```
    msg = "
    if request.method == 'POST' and 'username' in request.form and 'password' in request.form:
        username = request.form['username']
        password = request.form['password']
        cursor = mysql.connection.cursor(MySQLdb.cursors.DictCursor)
        cursor.execute('SELECT * FROM accounts WHERE username = % s AND password =
% s', (username, password, ))
        account = cursor.fetchone()
        if account:
            session['loggedin'] = True
            session['id'] = account['id']
            session['username'] = account['username']
            msg = 'Logged in successfully !'
```

```

        return render_template('index.html', msg = msg)
    else:
        msg = 'Incorrect username / password !'
        return render_template('login.html', msg = msg)

@app.route('/logout')
def logout():
    session.pop('loggedin', None)
    session.pop('id', None)
    session.pop('username', None)
    return redirect(url_for('login'))
